National Health and Aging Trends Study (NHATS)

Clockdrawing TIFs

README FILE

November 9, 2012

CLOCKDRAWING

The National Health and Aging Trends Study (NHATS) includes a clock drawing as one of several cognitive assessments. Sample persons are asked to draw a clock on a piece of paper and set the hands to show 11:10 (10 past 11).

DATA FILE

NHATS_ROUND 1 Clock_Drawings.zip is the file containing TIFs of the original clock drawings. Each TIF file name is the SPID (NHATS Sample Person ID) of the study participant.

CLOCK SCORING

NHATS also provides a score for each clock as a derived variable on the public use file (cg1dclkdraw). Details on NHATS scoring for the Clock Drawing Test is found in National Health and Aging Trends Study Round 1 User Guide: Final Release, *Section III.I Scoring Methodology for Clock Drawing Test .*

ADDITIONAL DOCUMENTATION

Additional documentation about the clock drawing test is available on the NHATS website (www.nhats.org) including information on data collection procedures (NHATS Round 1 Data Collection Procedures) and questionnaire items (see CG section in NHATS Round 1 Instruments Annotated with Variable Names and Labels: Final Release).
